EDUCATION

University of Toronto

Honours Bachelor of Science, Computer Science (Specialist in Entrepreneurship Stream)

Sep 2020 - Sep 2025

Toronto, ON

SKILLS

Languages: Python, Typescript, SQL (Postgres), C#, C, Java
Frameworks: Angular, React, Tailwind CSS, .NET Framework, Express.js, Django REST, Jest
Cloud: AWS (Lambda, ECS, EC2, Step Functions, SQS, DynamoDB, RDS), Azure Pipelines
Tools: Git, Docker, Postman, Figma, New Relic, Cursor

EXPERIENCE

Junior Software Developer

Deighton Associates Ltd.

Jan 2026 - Present

Whitby, ON

- Automated SBOM generation and dependency vulnerability scanning using **Syft** and **Grype** to satisfy GovRAMP security compliance requirements.
- Reduced PR validation time by **~15 minutes** by isolating test execution in **Azure CI pipelines**.

Full Stack Developer

Temerity Analytics (Startup)

Sep 2024 - Apr 2025

Toronto, ON

- Built secure features like role-based access control, API key authentication, and PDF/CSV reporting using **Django REST** and **Angular**, improving data security and automating reporting workflows.
- Automated mobile app's backend deployment using **Docker** and **AWS (CodePipeline, EC2, ECR, S3)**, enabling consistent production deployments with reduced release overhead.
- Implemented region-aware authentication and data storage using **Django REST**, **PostgreSQL**, and **Angular**-based request routing to meet GDPR data localization compliance requirements.

Cloud Developer

Caseware International

Jan 2023 - Aug 2023

Toronto, ON

- Implemented multiple components of an ETL pipeline using **AWS (Lambda, Step Functions, SQS, DynamoDB, RDS)** to extract and process historical data, enabling support for a new licensing feature.
- Built a UI component in **Angular** that tracks historical data extraction progress using **AWS Lambda**-based backend APIs, enabling user visibility into ETL pipeline execution status.
- Built an internal dashboard in **New Relic** using **NRQL** queries on **AWS CloudWatch** logs to monitor historical data extraction processes, improving QA productivity and accelerating bug detection.

PROJECTS

SoundSync Ensemble

- Built a real-time collaborative music web app using **React**, **Express.js**, **Tailwind CSS**, and **Socket.IO**, enabling group music creation with MIDI instruments.
- Implemented listening and playback features by aggregating user inputs into a single audio stream using blobs, stored in **MongoDB**.
- Deployed on **DigitalOcean** using **Docker** and **Nginx** with SSL encryption via **Let's Encrypt**, including domain configuration.

LangChain AI Open-Source Contribution

- Implemented and merged a PR that added a new **LangChain** Agent tool for multimedia retrieval via NASA's Image and Video Library API.
